

**CCS is offering a summer special: a free month of ProVent, regardless of the number of systems you have! This promotion is for *new ProVent customers only* and runs through **September 31**. No contract, and no cost if you decide not to keep it.**

### Now, what is ProVent and why does your company need it?

ProVent is the CCS Remote Management tool that provides 4 main elements...

**The Remote Management Tool (RMM)** is the foundation of the ProVent software. It allows us to audit your computer's hardware or software. If you needed to know what software was installed on an individual's PC, we can tell you. If you wanted to know which PC's are due for replacement based on system specs and age, we can do that too. The tool alerts us to when a hard drive might be going out or filling up, which saves you time and money. It is a lot easier and cheaper to replace a PC before it dies! The RMM tool allows us to quickly remote into the computer when needed to fix minor issues rather than having a tech come onsite.

**The Antivirus** module of ProVent is based on BitDefender. This antivirus engine is considered one of the top 5 best AV programs for businesses year after year. It's lightweight and powerful. It would replace the current Antivirus program on all your systems. No more annual renewals for Antivirus, it's included!

**The Content Filter** module is one of the most important aspects of the software suite. It can block a user before he/she accidentally infects your network by clicking on a link and allowing the virus to circumvent your antivirus and firewall security. Today, this is the most common way of infecting a network. Furthermore, it can block sites like porn or social sites if needed. Users can be broken into groups and if you want, policies can be enabled or disabled based on day or time (like lunch).

**The Patch Management** allows us to monitor, push, and pull Windows and third-party updates as needed and recommended. Automatic updates simply don't work, and more importantly with this software, we can stop problematic updates before they take you down.

**You get the benefit of having a fulltime IT staff monitoring your systems, at the cost of \$10 per PC / Per Month.**

### Introducing our new project to provide fresh water to communities overseas!

Dirty water impacts health, education and income. Providing a reliable and safe water source allows communities to thrive.

The Water Project provides access to safe and reliable water across sub-Saharan Africa. Together, our support can end the water crisis and restore hope, one community at a time.

The coolest part? We'll all get to see our impact! We'll receive updates including photos and stories, maps and more!

Lives change when communities gain access to clean water. Let's experience it together. Donate to our fundraising campaign today!
