**Uh-Oh, Here We Go Again.**

With the possibility of another quarantine looming over our heads, now might be the time to bump up your remote workplace game. And I am here to help.

Does your laptop have a USB-C port? If it does, you might be surprised as to what that little port can do! What if I said that one little USB-C port could run two external monitors, a full-size wireless keyboard and mouse, a printer AND still charge your laptop?

Believe it or not, at the same time it can run audio through your headphones and charge your phone. OK, so if this sounds impossible, let me introduce you to the Kensington Universal Docking Station. For \$299 this little wonder can do all of these things (charging your PC would depend on whether your laptop can charge through your USB-C port – not all do.)

So, we have created a Road Warrior (or Home Warrior) Package to help you with quickly moving to your base of operations at home, all by plugging in one tiny connector into the laptop!

Let's start with the monitors: Our **Acer 24" monitors** are large, come with 3-year manufacturer's warranties and have all the ports and cables you need to connect to the docking station for \$199 each.

Our **Logitech cordless keyboard and mouse** is a perfect companion to your regular office as typing on laptop keyboards for extended periods of time can get cumbersome. Our cordless combo is rugged, full sized and both mouse and keyboard together are only **\$59**.

The **Kensington Docking Station** works with most brands of laptop including Dell and Lenovo. It even works with many Chromebooks! After everything is configured for the first time, (something we can assist with remotely), from that point on it will be plug-n-play! It has USB ports you can use for other items like charging your phone or adding a printer, it can run those two big monitors and the full-size keyboard and mouse... and it's only **\$299**.

Speaking of a printer, how about a small **Lexmark Black and White Laser Multifunction printer** with the capability to scan in color (both sides) print (both sides) and e-mail scanned documents for only **\$299!** We have those too.

Do you have our **Office 365** service? If you do, we can easily add a full version of Word, Excel and Outlook to your laptop station for no additional software cost. You can be collaborating with your team from home in no time.

Don't forget protection. If you have our **ProVent** service at work providing advanced business protection for your computers at work, just let us know and we can quickly install it on your home PC. The license is only \$15 per month and gives you the peace of mind that you will have the same level of protection as you do at work. And because we don't have long term contracts, we can uninstall it quickly and remove that license as soon as you want to avoid any further charges.

Imagine using one small cable to give you all of the capabilities that you have at your office desk, and all for around \$1000. Give us a call and we'll get you setup. Stay safe!
