**Now You Can Affordably Monitor  
All of Your Computers 24 Hours A Day  
SOC: The Next Level of Security for Your Business**

Are you concerned that in today's environment of ever-increasing threats, that you are not doing enough to protect your company's computer network and data? What if you could have an expert monitor all of your computers, server and firewall 24 hours a day / 365 days a year? You don't have to hire someone to do this. With Rocket Cyber, you get a Security Operations Center (SOC) for a tiny fraction of having to pay a worker or IT company to manually monitor your computers.

So, you already have our robust and powerful EDR solution to protect against malware threats. You already have a firewall, Windows is up to date and your backups are humming along nicely. The only nagging concern you have is that during the night, over the weekend or even during the workday, you wish an actual person or group of people was actively monitoring everything that is happening to your computers just to make sure nothing sinister is going on. Now you can, and it's not expensive.

Your malware security software is constantly searching and spitting out data about what it finds. So does your firewall. Every second, a multitude of reports and data are being generated by software and hardware in the background. But no person would be able to sift through all of this for 24 hours a day. But Rocket Cyber can! It uses artificial intelligence to analyze almost EVERYTHING and does it far faster than a human can. All of these protection services and appliances can report to Rocket Cyber for instant analysis. Then a highly technical group of people watch over this data to react at a moment's notice any time of the day or night. They can even shut down malicious activity even though no one is in the office!

**N. American SMBs Under Attack**

(APTs) advanced persistent threats are well-funded, highly skilled, evade security defenses and infiltrated over 76% of SMBs (small-medium businesses) throughout N. America in 2019. Despite the investment of anti-virus and firewall prevention solutions, adversaries continuously demonstrate that yesterday's security stack is no match for today's attack tactics and techniques.

This is where **RocketCyber** and **Managed Service Providers** unite to combat the daunting volume of cyber attacks helping 30.8 million SMB owners avoid becoming the next victim.

**Introducing RocketCyber Managed SOC:**

**It monitors your endpoints** (computers!) Windows & macOS event log monitoring, breach detection, malicious files and processes, threat hunting, intrusion detection, 3rd party NGAV integrations and more.

**It monitors your firewall** and network log monitoring integrated with threat reputation, WHOIS and DNS information.

**It monitors the CLOUD!** Microsoft 365 security event log monitoring, Azure AD monitoring, Microsoft 365 malicious logins, Secure Score.

It's literally like hiring a full time IT professional to determine if someone clicked on the wrong thing, or someone in a far away place logged into one of your employee's Office 365 accounts... and so much more.

We suggest Rocket Cyber's SOC services to bridge the gap between protective software services and the analysis of all that data to better protect our customers in this new high-threat environment we all find ourselves in.

The cost of the service is \$15.99 per PC (and firewall) per month. Installation is quick and painless. For very little investment, consider adding that last layer of defense for your company. Call us for an easy quote and description of how it can save your company from disaster.

## CCS Technologies Referral Program

Do you know of someone looking for an  
IT service provider or who could  
benefit from our services?

Please visit our referral page at  
<https://ccstech.net/referrals/>  
and send us their information.

If your referral leads to a signed service quote,  
you will be rewarded with a **\$100 Amazon Gift Card**,  
and your company will also  
be provided a **\$150 invoice credit!**
