

Two Monitors?

If you haven't done it yet, now is the time!

Ask just about anyone who has multiple monitors whether they would go back to just one. Most likely, none would opt for the single monitor environment. It's a proven fact, more real estate on the screen directly corresponds to improved efficiency. But most people who have a single monitor are concerned that it's too big of a hassle. Well it's not and here are some myths to dispel.

Volume 23, Issue 2

February 2023

I bought my monitor years ago and I could never find a second one to match

- Guess what? You don't have to. Unless your monitor is REALLY old and only has an SVGA cable (Blue) then you can mix and match monitors to your heart's delight. There are even adapters out there to convert HDMI to Display Port, DVI to HDMI and all types of headache-inducing acronyms. The point is, unless you are obsessive about having everything match up perfectly, adding a different monitor is no problem!

My computer is too old – This might be true but if you purchased your computer less than 5 years ago, most likely your computer can output to multiple monitors. This is especially true if you purchased your computer from Aeros. All of our systems within the last 5 years or more have dual display capability.

It's too difficult to setup – Windows 10 and 11 make setting up multiple monitors extremely easy. Just plug your monitor in, boot up your PC and it will recognize the extra monitor and give you a few options. But if you feel it's still too difficult, read on. We have a special that may peak your interest below.

It's too expensive – Now here is where we can really help. For a limited time, we are offering the following special to bring you into the 21st century.

New 24" Monitor or 27" Monitor (Cables included)

Dual monitor arm that mounts directly to your desk for full motion

Labor to install, configure and train you on how to use multiple monitors

All of this for only \$599 for the 24" Monitor and \$639 for the 27" option

If you want matching monitors just add \$199 or \$239 depending on size

Interested? Then just give us a call.

We have these items in stock and in no time, you will be twice as effective!

Have you been purchasing and upgrading computers on your own?

Please remember, when you purchase or upgrade systems yourself that you still need to give us a call to make sure we get monitoring and security loaded to the systems. Here are a couple of reasons why this is important:

First, until you contact us, your systems do not have any monitoring or security. Getting the new systems and your business data protected is vitally important.

Second, have you assessed whether any of the new systems need to be backed up? Most companies replace their most critical systems first when upgrading. If you have replaced this system and haven't talked to us then you likely don't have any backups being conducted.

Third, did you replace any systems? If so, you are still potentially being charged for your old systems even though you aren't using them anymore.

If you have any questions about what systems are being protected, please reach out to us so we can help you do an audit of what is being protected and help identify any gaps in protection.
